

# The Einstein's Field Equations for Pedestrians

Ermys Bornilla of De La Salle University Manila, Philippines

## Abstract

---

This paper is for the curious and intelligent layman who has heard of Einstein's General Theory of Relativity and read popularizations of it. But what does it really look like, as compared to, say, Newton's laws of motion? Assuming basic algebra and related mathematical ideas, the article presents the field equations for the appreciation of a general audience.

## Keywords
